FOREWORD

In this special issue titled “Topology and Linear Algebra in Cryptographic Security: New Frontiers in Cryptanalysis”, we explore the intricate relationship between advanced cryptographic techniques and their mathematical applications in cybersecurity. This issue encompasses a variety of topics, each contributing to the expansive fields of data protection, privacy, and cyber defense.

Overview of the Topic: Integrating topology and linear algebra into cryptographic security represents a significant advancement in cryptanalysis. Topology provides a framework for understanding the properties of space and continuity, which can be applied in designing cryptographic protocols that are resilient to various forms of attack. Linear algebra, on the other hand, offers powerful tools for constructing encryption algorithms, such as the Hill Cipher, which utilizes matrix operations to secure data.

This issue explores how determinants and matrix operations can enhance encryption techniques and secure data transmission. For instance, determinants play a crucial role in ensuring that encryption matrices are invertible, which is essential for decryption. Additionally, we examine the application of topological coding in asymmetric encryption systems, where the unique properties of topological structures can provide robust security against emerging threats, including those posed by quantum computing.

Another critical area addressed is wireless network security, which explores the challenges and potential solutions for safeguarding communication networks which utilizes wireless technology. Insights into cryptography and anti-hacking systems provide valuable perspectives on cracking cryptographic algorithms and designing robust security measures.

We also investigate social network security and privacy challenges, focusing on user data protection and privacy preservation in online transactions. The “Data Warehouses and Databases” section explores various methods to safeguard large-scale data storage systems.

Delving into the complexities of emerging technologies, we address the unique security requirements of 5G and the Internet of Things (IoT). The article “Security in Cloud, Servers, and Mobile Systems” provides insights on how to protect data across all devices and platforms.

The “Web Data Protection and Privacy” field examines multiple approaches to securing data on the Internet, aiming to uphold user privacy and security. At its core, “Cryptography in Communications” analyzes the diverse applications of cryptographic methods in ensuring communication secrecy.

We received 95 paper submissions from researchers worldwide for this special issue, reflecting a broad spectrum of innovative ideas in “Cutting-Edge Cryptography and Cybersecurity: Innovations and Applications”. After a rigorous peer-review process, which ensured that each paper met the highest standards of quality and relevance, 53 papers were accepted for publication in Parts 4-A & 4-B. This acceptance rate highlights our commitment to excellence in the research we publish, ensuring that only the most impactful contributions are included in this special issue. We are proud to present these selected works, representing the forefront of advancements in the theme of the conference.

We thank each author for his invaluable contribution in advancing our understanding of cybersecurity and cryptography. This special issue underscores the importance of sophisticated cryptographic techniques in enhancing the scope of cybersecurity and data protection. We are particularly grateful to Professor B. K. Dass, Chief Editor, for his continuous encouragement and guidance throughout the process of publishing in the *Journal of Discrete Mathematical Sciences & Cryptography (JDMSC)*, published by Taru Publications, New Delhi.

Topology and Linear Algebra in Cryptographic Security : New Frontiers in Cryptanalysis (Part-A)

CONTENTS

M. SH. HATEM AND F. F. KAREEM Cubic bipolar ideals of a TM-algebra	1007–1013
S. M. ABRAHEM AND A. S. ABED Cubic JD-fuzzy ideals of BH-algebra	1015–1023
A. FARIS AND S. A. AL-SAAFI Fully Stable Semirings and Related Concepts	1025–1030
S. O. DAKHEEL, Z. A. AHMED AND M. J. M. ALI On compactly packed acts over monoid	1031–1036
A. A. ABBAS AND Z. M. SALLAL Hybrid biometric authentication for banks security improvements	1037–1050
Z. A. ABDULRAZZAQ, M. S. NAYEF AND M. HBAIB On semi-continuous and quasi-semi-continuous modules	1051–1058
A. S. ABED AND N. D. ABBAS Model operator ASA on intuitionistic fuzzy BRK-subalgebras	1059–1065
S. M. ABRAHEM, B. M. ZWAIN AND N. D. ABBAS On the bipolar valued fuzzy RG-sub algebras	1067–1074
N. H. MALIK Isomorphism of BD-algebras	1075–1079
M. SH. HATEM, F. F. KAREEM AND B. DAVVAZ Cubic intuitionistic ideals of a TM-algebra	1081–1089
H. A. RAMADHAN, A. A. AUBAD AND A. AL-AADHAMI Some properties of the result involution graph of Harada-Norton group HN	1091–1096

I. S. AHMED, H. F. ABBAS AND S. H. ASAAD Study the new generalization of fuzzy σ -algebra namely fuzzy $\mathcal{P}^*$ -algebra	1097–1103
A. ALDULAIMI AND I. ELLOUZE On some features isomorphisms of (L, W) -modules	1105–1115
O. A. RAZZAQ Enhancing IoT-based wireless sensor network security with cryptographic techniques	1117–1130
N. S. AL-MOTHAFAR AND Z. T. ALZUBIADEY Radical small submodules and hollow modules	1131–1136
H. Q. HAMDI AND N. S. AL-MOTHAFAR Purely co-closed and purely co-essential sub-modules	1137–1144
M. AL-LABADI, S. KHALIL, A. N. HASSAN AND W. AUDEH New structure of bipolar fuzzy rho-ideals in rho-algebraic semigroups	1145–1151
F. H. MOHAMMED AND R. M. JEATHOOM On f -lifting modules	1153–1158
Z. M. KHALAF AND H. Y. KHALAF New resultes for T-prime fuzzy modules	1159–1166
A. A. SADEQ AND H. R. HASSAN The complex elements of the skew partition $(12,6,3)/(1,0)$	1167–1171
A. A. ASMAEL AND S. KHALIL Pseudo permutation-BCK-algebras with their ideals	1173–1179
H. A. A. ALMWAIL AND S. KHALIL On intuitionistic fuzzy BZ-ideals in BZ-algebras	1181–1186
S. N. ABD-ALRIDAH The special case for resolution of two rows : Weyl module for skewpartitions $(9,6)/(2,0)$ & $(9,6)/(3,0)$	1187–1194
Z. F. HASSAN, Z. F. HASSAN AND J. L. DHEYAB Best approximation on graphs	1195–1199
M. A. A. AL-YASEEN, H. K. ZGHAIR AND R. S. ABOOD The property of inverse shadowing in $\mathcal{G}$ -group with general properties of sequences	1201–1206

M. S. NAYEF AND D. H. WAREED Small annihilator maximal sub-modules	1207–1213
A. K. ABDULAAL, A. O. AKRAM, L. HINDI, N. S. JASIM, D. S. ABDULRAHEEM AND A. Y. MUHAMMAD Result for the series in the partition (12,7,4)	1215–1219
S. M. SALIH AND D. M. HAMEED Jordan permuting 3-left (resp. right) μ -centralizers on prime semi-rings	1221–1226
A. K. O. AL-JUBORY AND I. H. JUMAAH Solving pantograph type through shifted Vieta-Pell polynomials	1227–1235
K. A. L. ALGHURABI AND A. M. A. ALHOSSAINI Predictable R-semimodule with some properties	1237–1243
M. S. G. SHNAIN AND A. A. J. AL-SWIDI Pseudo weakly completely prime ideal in near ring	1245–1255
I. H. JUMAAH, A. J. EDAN, L. A. HUSSEIN AND A. I. MANSOUR Results of fuzzy soft symmetric matrix	1257–1264
