FOREWORD

This special issue titled “*Advances in Computational Security and Cryptographic Technologies through Artificial Intelligence, Machine Learning, and Multimedia Analytics*” presents a collection of high-quality research contributions that explore the convergence of discrete mathematics, graph theory, cryptography, artificial intelligence, machine learning, multimedia analytics, and modern communication networks. The issue highlights the growing importance of mathematical foundations in addressing evolving cybersecurity challenges across next-generation digital infrastructures.

A significant portion of this special issue focuses on advanced cryptographic mechanisms for securing contemporary communication networks, including Software Defined Networks (SDN), Internet of Things (IoT), Wireless Sensor Networks (WSNs), Blockchain Environments, Healthcare Information Systems, Cloud-Edge Infrastructures, and Emerging 6G Communication Systems.

This special issue received an overwhelming response from researchers across academia and industry worldwide, with more than 200 manuscript submissions covering diverse aspects of mathematical modeling, artificial intelligence, cybersecurity, blockchain, intelligent communication systems, and computational intelligence. Each submission underwent a rigorous double-blind peer-review process conducted by subject experts to ensure originality, technical quality, and scientific significance. Following multiple rounds of careful evaluation, 29 high-quality research articles were selected for publication which encompass a broad spectrum of theoretical and applied research in computational security and cryptographic technologies.

The accepted papers present innovative methodologies, theoretical developments, and practical applications that significantly advance the fields of intelligent computational frameworks, secure cyber-physical systems, next-generation communication networks, and emerging digital technologies. The integration of artificial intelligence and machine learning with cybersecurity represents another major theme of this issue.

We extend our sincere appreciation to all authors for their valuable contributions, to the reviewers for their insightful comments and dedicated efforts, and to the editorial team for their continuous support throughout in bringing out this special issue. We are particularly thankful to Professor B. K. Dass, Chief Editor, for his constant support and encouragement during the publication process in the *Journal of Discrete Mathematical Sciences & Cryptography*, published by Taru Publications, New Delhi.

CONTENTS

S. S. DASH, A. K. BEHERA, D. P. BHATT A AND D. ACHARYA Some explorations on odd-even graceful labeling of graphs	2989–2999
P. VATS, S. K. BUDHANI, S. SHANKER, D. K. SRIVASTAVA, M. L. SAINI AND A. K. SAINI P4-assisted context-aware encryption framework for secure packet transmission in active SDN networks	3001–3009
Y. T. JEMBERIE, B. B. BELAYNEH, Z. T. WALE, G. M. ADDIS, S. A. FUEFA AND D. P. SHARMA Soft rings based on soft binary operations	3011–3025
P. VATS, N. TEWARI, S. SHANKER, D. K. SRIVASTAVA, M. L. SAINI AND A. K. SAINI Trust-aware ad hoc network security using random bit operations and RC4 stream cipher framework	3027–3036
B. PATTANAIK, A. K. BEHERA, C. BOHIDAR AND B. BISWAL Different classes of graceful coronas and their second kind	3037–3049
Y. M. MANJUNATH, H. L. PARASHIVAMURTHY, S. G. BABU AND G. MANJUNATH Enhancing network security with graph theory through identification of critical nodes and vulnerabilities	3051–3064
A. KUMAR, V. REVATHI, J. K. BARUAH, P. C. PRADHAN AND A. NANTHAAMORNPHONG A Module-LWE driven post-quantum security model for 6G networks using discrete mathematical cryptography	3065–3073

S. KHULLAR, R. K. SAXENA, A. PANDIT, V. BIRADAR AND M. SAHU Hybrid discrete mathematical and deep learning techniques for next-generation cryptographic protocols	3075–3084
M. SHARMA, A. ARORA, P. MATHUR, S. BHUSHAN AND A. K. GUPTA Discrete mathematical modeling–driven machine learning framework for secure encrypted DDoS attack detection in cloud and edge computing	3085–3093
A. BANSAL, S. S. BISWAS, MD. T. NAFIS, S. PARVEEN, P. AGARWAL AND M. A. AHAD An approach for IoT graph modeling for handling smart city services	3095–3106
S. SHARMA, G. DEVI, P. RATHI, N. SOMS, S. P. CHAKRAVARTHY AND P. VATS Secure wireless communication in 5G networks using optimized cryptographic algorithms	3107–3116
S. S. KUSHWAHA, S. C. ADDIMULAM, M. K. RAWAT, S. SRIDEVI AND A. NOONIA Design and analysis of a discrete mathematical model for secure and encrypted dynamic sharding in blockchain systems	3117–3125
A. NANTHAAMORNPHONG, A. KUMAR, V. REVATHI AND N. GAUR Data privacy and security in the future data-driven healthcare ecosystem : Cryptographic approaches, challenges, and open research issues	3127–3136
A. KUMAR, A. K. GUPTA, P. MATHUR, C. SINGH AND V. TIWARI A discrete mathematical framework for network intrusion detection with applications to cryptographic network security	3137–3147
A. KUMAR, M. SHARMA, A. S. RATHORE, S. GHODE AND V. TIWARI Encryption-assisted reversible data hiding using median prediction and grayscale invariance for high-security image systems	3149–3158
SUSHAMA, S. VAIDYA, A. K. SAINI, M. L. SAINI, J. YADAV AND P. VATS Design of ECC-based secure communication protocols over discrete mathematical structures for 6G WSNs	3159–3166
A. K. SAINI, M. WADHWA, R. RAWAL, S. JAIN, R. BATRA AND P. VATS Lightweight elliptic curve cryptography for SDN-managed secure communication in 6G wireless sensor networks	3167–3176

R. S. PHARANDE, B. TIWARI AND S. BHOITE Dynamic entropy-based lightweight security architecture integrating ECC signcryption and zero trust for interoperable healthcare systems	3177–3195
M. SHARMA, P. SHARMA, P. RATHI, S. KUMAR, V. SONI AND P. VATS A cryptography-oriented reversible data hiding scheme using median prediction and grayscale invariance for secure image steganography	3197–3205
A. TIWARI, S. GUPTA, A. SANDHU, P. S. G. A. SRI, H. S. ARRI AND M. SHARMA Cryptographic and discrete approaches to IoT cybersecurity : A risk management and security analysis	3207–3217
P. MATHUR, K. L. JAIN, M. NAWAL, NEERAJ AND A. K. GUPTA Security analysis of cryptographic Boolean functions using a discrete mathematical model and machine learning	3219–3227
D. P. BHATT, P. VATS, S. THAREWAL, S. P. GOJE, R. K. POPLI AND S. SHARMA Cipher cell-based information-theoretic encryption over 6G channels	3229–3237
R. KUMAR, S. NARAYAN, S. TRIPATHI, A. K. SINGH AND G. BERAR Mathematical modeling and security analysis of a lightweight cryptographic encryption algorithm for resource-constrained IoT devices	3239–3248
P. MATHUR, P. GUPTA, K. NANDHINI, L. GOEL, S. S. KUSHWAHA AND A. K. GUPTA Spectral security analysis of cryptographic Boolean functions using discrete mathematical modelling and machine learning	3249–3257
S. KUMAR, M. M. SHUKLA, A. K. PHOGAT, S. JAIN, R. BATRA AND P. VATS An efficient watermark-driven steganographic framework for secure multimedia communication	3259–3268
A. K. SAINI, V. THADA, S. JAIN, SWATI, R. MEHRA, P. VATS AND S. L. YADAV Cryptanalysis-resistant SDN architecture for dynamic traffic management using applied algebra and elliptic curve cryptography for secure tenant isolation	3269–3277

P. MATHUR AND A. K. GUPTA

A graph-theoretic discrete mathematical model for
cryptanalysis of classical ciphers using spectral transition
network analysis

3279–3294

A. K. SAINI, M. CHAUHAN, S. K. BUDHANI, A. MALHOTRA,
M. L. SAINI AND P. VATS

Secure data acquisition in web crawlers using
steganographically watermarked images

3295–3303

P. MATHUR

A discrete graph-theoretic spectral framework for analyzing
classical cipher security

3305–3313
